

# Swan Short-Term High Yield – CHF

## January 2024

### Strategy

Swan Short-Term High Yield is the UCITS version of our Fixed Income Intermediate risk profile. Depending on market conditions, the strategy combines an highly diversified buy and hold portfolio of liquid short-term fixed income securities with an opportunistic allocation to longer dated securities in Global HY markets. Target Return is 3 months LIBOR + 250 bps.

### Risk Profile

Conservative

**Intermediate**

High Reward

### Global market picture

High Yield Credit markets reported a positive performance in January ranging from +1.11% for EM corp HY to +0.95% of the EU HY in tandem with positive equity markets, S&P500 (+1.59%) and Eurostoxx50 (+2.81%). The IG EUR market was positive by +0.09% while the short-term (1-3 year) H1WN global HY index reported a positive performance of 0.83%. The Global unconstrained (in terms of maturity) HY index was positive at +0.31%. The FED had its policy decision meeting on the 31st of January where it held interest rates deep in restrictive territory remaining at 23 years highs of 5.37%, signaling that while the bias towards further rise had gone, the FED is not ready to cut yet. Economic data continue to be strong in US, with 4Q23 growth at 3.3% YoY and core inflation slightly lower at 3.9% YoY. The ECB confirmed rates at 4%, noting that wage growth was showing signs of slowing and inflation falling in line with expectations. Core inflation in Eurozone remained stable at 3.4% YoY, but Lagarde remains confident that inflation could "decline more quickly in the near term" if energy prices continue to drop in line with expectations. Rates market incorporated a relatively high probability of easing by both the FED and ECB during the next quarters, even if we believe central banks will act only when they will be convinced that inflation will stay below target on a sustained basis. The 10 years bund yield was higher at 2.17% (+15bps in the month), in tandem with the 10 years Treasury at 3.91% (+3bps in the month). Oil moved lower to 82\$ per barrel, while US dollar rebounded with DXY at 103.27. Our funds have a yield to maturity between 7% and 9%, combined with an average spread duration around 17 months. The combination of diversification, good credit quality and high expected yields pave the way for extremely attractive returns in the next future.

### Active Portfolio

Fund's actual exposure (beta and duration adjusted) is 43.57%, lower relatively to last month (52.86%). The mix between Strategic and Tactical positions is 0% Strategic and 100% Tactical. The fund has an estimated gross yield of 7.83% (in EUR), a spread duration of 1.76 and a z spread of 468.

### Yield-type bucket

The bucket generated a positive gross contribution to the monthly performance, with 89% of the positions (59 out of 66) contributing positively. The YTM remains attractive and conditions are always interesting in the short-term part of the credit curve; the average life of the YT portfolio is very short (14 months or 1.20 of spread duration).
