

Swan Bond Enhanced Sicav–SIF CHF

May 2019

Strategy

The sub-fund aims to generate significant excess return vs 3m Libor CHF in combination with extremely low volatility. The strategy is focused on the “buy and hold” levered investment in a highly diversified and granular portfolio of liquid short-term fixed income securities. Leverage is normally included between 100% and 200% of the NAV with invested capital between 2x and 3x the NAV.

High Reward

Global market picture

May was the first negative month of 2019: European credit markets were negative (H9PC Index -1.39%), likewise equity markets with Eurostoxx 50 and S&P 500 losing respectively -6.66% and -6.58%. Economic data sent negative messages in US: flash PMI at 50.9 coupled with weak retail sales indicated possible further weakness in the economy; these circumstances added to ongoing trade tensions with China caused a significant downward movement in 10 years Treasury from 2.50% to 2.12% (lowest level since August 2017). The FED left rates unchanged on 1st May meeting and during the conference Jerome Powell was quite hawkish, rejecting the possibility of rates cut, but markets participants continued to be highly skeptical about FED policy, pricing around two cumulative cuts for 2019 and three and a half for 2020. Yield on 10 years German Bund was influenced by the risk-off tone of the markets, closing the month at -0.20% (lowest level on history). Political risk was concentrated on the Brexit saga (with Theresa May announcing to step down) and continuous trade war between China and US: new sanctions imposed by Trump administration on tech giant Huawei caused retaliation by China that threatened bans on export of rare earth. Emerging markets reported a slightly negative performance (-0.15%) with LATAM being the best performer during the month. EM resilience was mainly due to the rally in Treasury and generic dovish tone of central bankers around the world. Oil retraced significantly during the month (Brent down 11% at 64USD per barrel) due to renewed worries on global growth.

Yield-type strategy

The bucket generated a positive gross contribution to the monthly performance, with 91% of the positions (83 out of 97) contributing positively. Positive contributions were homogeneously distributed, while negative contribution was generated by the COFP complex. The average life of the yield-type portfolio is very short (10 months or average spread duration of 0.82), combined with a yield of 3.20% (net of funding cost in EUR) and z-spread of 448 basis points. The fund is levered, being invested at about 159% currently.
