

Swan Bond Enhanced Sicav–SIF CHF

August 2019

Strategy

The sub-fund aims to generate significant excess return vs 3m Libor CHF in combination with extremely low volatility. The strategy is focused on the “buy and hold” levered investment in a highly diversified and granular portfolio of liquid short-term fixed income securities. Leverage is normally included between 100% and 200% of the NAV with invested capital between 2x and 3x the NAV.

Global market picture

August was a mixed month for financial markets: European credit markets were positive (H9PC Index +0.64%), while equity markets were negative both in Europe (Eurostoxx 50 -1.16%) and in US (S&P 500 -1.81%). The month started with a bounce in volatility due to renewed tension on trade war: Trump tweeted that US would place a 10% tariff on additional \$300bn Chinese goods starting from 1st of September while China retaliated with a ban on imports of agricultural products from United States and further devaluation of CNY above the psychological level of 7 USDCNY. Additional pressure on growth expectations has been generated by negative economic data in Europe: a bigger than expected fall in industrial production in Germany was confirmed by a negative (-0.1% QoQ in 2Q) GDP reading, while at the same time the Italian coalition reached a breaking point with League leader Matteo Salvini asking for snap elections. Negative sentiment pushed yield on government bonds further lower: German 10 years Bund closed the month at -0.70% (-26bps during the month) while 10 Years Treasury reached 2016 lows at 1.50% (-52bps during the month). The central banks' dovish tone added pressure on “risk-free” rates: the FED is expected to cut rates for the second time at its September meeting, while a new QE plan coupled with a rate cut could be unveiled by the ECB next month. Emerging markets reported a negative performance (-2.60%) with LATAM being the worst performer during the month. Argentina was the main driver of this movement: ARS lost a fifth of its value after opposition candidate Fernandez won primary election, forcing current president Macri to delay \$7bn of payment on short term local debt and seek a voluntary reprofiling of \$50bn of longer-term debt.

Yield-type strategy

The bucket generated a negative gross contribution to the monthly performance, with 80% of the positions (76 out of 95) contributing positively. Positive contributions were homogeneously distributed, the only exception being COFP 05/21, while negative contributions were generated by DOFSUB 05/20 and YPFDAR 09/19. The average life of the yield-type portfolio is very short (10 months or average spread duration of 0.87), combined with a yield of 3.35% (net of funding cost in EUR) and z-spread of 467 basis points. The fund is levered, being invested at about 146% currently.
