November was a positive month for financial markets: European credit markets were positive (H9PC Index +1.11%), and equity markets were positive both in Europe (Eurostoxx 50 +2.75%) and in US (S&P 500 +3.40%). The month started with a small rebound in the US Manufacturing ISM, signaling that the economy could be close to a bottom: GDP release confirmed that US economy grew at around 2% in 3Q, while unemployment remained low at 3.6%. With the resilience demonstrated by US data, the FED seems to consider monetary policy in a "good place" and markets are forecasting slightly more than one cut until December 2020. Christine Lagarde started her mandate as ECB president during November: her speeches did not send clear signals about an imminent action on monetary policy, that we expect to remain supportive for markets. Data from Eurozone were slightly positive, with flash PMI rebounding and 3Q19 lackluster growth in Germany linked to a drag from inventories. German 10 years Bund closed the month at -0.36% (+5bps during the month) in tandem with 10 Years Treasury +1.78% (+8bps during the month). Bullish sentiment on the markets was mainly due to optimism coming from progress in the US-China negotiations on a potential deal; we saw several headlines announcing a possible Phase One deal, immediately followed by denials and postponements, and we think this dispute will not be resolved anytime soon. Emerging markets reported a positive performance (+0.73%) with ASIA being the best performer during the month thanks mainly to China; in Argentina Fernandez still has to approach investors for a possible debt restructuring, while pressure is mounting in LEBANON, where government resigned after harsh public protests. Oil was up 3.65% in the month, closing at 62.43 USD per barrel.

Yield-type strategy

The bucket generated a positive gross contribution to the monthly performance, with 92% of the positions (93 out of 101) contributing positively. Positive contributions were homogeneously distributed, the only exceptions being COFP 05/21 and IPFLN 04/21, while there were not significant negative contributions. The average life of the yield-type portfolio is very short (10 months or average spread duration of 0.80), combined with a yield of 2.24% (net of funding cost in EUR) and z-spread of 351 basis points. The fund is levered, being invested at about 142% currently
