

Swan Ultra Short-Term Bond – CHF November 2020

Strategy

The sub-fund aims to generate excess return vs 3m Libor CHF in combination with extremely low volatility. The strategy combines the “buy and hold” investment in a highly diversified and granular portfolio of liquid short-term fixed income securities with the opportunistic and residual allocation of the promised average spread over risk free rate to a number of interest rate and FX active strategies.

Global market picture

During November European credit markets experienced an extremely positive performance (H9PC Index +4.37%), in tandem with the movement of the Eurostoxx 50 (+18.06%) and S&P 500 (10.75%). In this context Swan funds continued to move higher with a positive monthly performance ranging from +0.78% to 1.52%: our SIF funds are in positive territory (+5.65% SLSC and +5.00% for SBE) and also UCITS funds registered significant positive performance YTD (+2.2% USTB and +2.65% for STHY), while credit markets are reporting low single digit positive returns YTD (European HY +1.94%, Emerging HY +4.52%, US HY +2.51% and EUR IG +2.49%). The massive resurgence of Covid-19 infections caused new, but less severe, lockdowns in Europe: Q4 contraction is estimated at -9% (2020 should deliver a negative GDP growth of -7%), while consensus in US is for a -3.6% YoY growth in 2020. Disappointing growth data were more than compensated by the announcement that several anti-Covid vaccines have been positively tested: mass vaccinations should start in late 2020 in US and in the first quarter in 2021 in Europe. November was also the US presidential election month: Joe Biden, as expected, won, but the Senate majority is still not defined yet; Donald Trump did not immediately accept the loss, and started preparing a hard transition to his rival. In this context, the 10 years bund yield moved higher by 5 bps to -0.57% while the 10 years Treasury moved lower 3bps to 0.84%. We think that this is still an interesting entry point for our strategy: current YTM, albeit reduced, give us confidence on the capability to generate positive performance in line with targets during 2021; average maturity of the bonds in our portfolios is still around 1 year and should help reduce volatility in case of new episodes of market stress.

Yield-type strategy

The bucket generated a gross positive contribution to the monthly performance, with 95% of the positions (111 out of 117) contributing positively. The YTM remains attractive and conditions are always interesting in the short-term part of the credit curve. The average life of the yield-type portfolio is very short (10 months or 0.80 of spread duration), combined with a gross yield of 2.85% (in EUR) and z-spread of 408 basis points.
