CFS Rating

Global market picture

During February European credit markets experienced a negative performance (H9PC Index - 2.98%), in tandem with the movement of the Eurostoxx 50 (-6.00%) and S&P 500 (-3.14%). In particular, the credit market environment was extremely negative with year to date performances ranging from -7.5% for EM corp HY to -3.78% of the EU HY component. The IG EUR market is also negative by about 3.93% YTD, mainly due to the rates component. The short-term (1-3 year) H1WN global HY index also reports a performance of -4.64% YTD while the Global unconstrained HY lost 4.59%. Sell-off intensified in the last week of February following Russian invasion of Ukraine: at the moment objectives of the operation are not clear yet, but market did not expect a full invasion and immediately started pricing in very negative scenarios. In this context, the 10 years bund yield was higher at +0.13% (+12bps in the month) in tandem with the 10 years Treasury at 1.82% (+5bps in the month), mainly due to concerns on inflationary pressure linked to energy cost, with oil prices reaching highest level (101\$ per barrel) since 2014. The funds' strategy remains focused on the short term: we remain committed to our investment philosophy of constant and significant excess returns, coupled with low volatility (last period was an extraordinary one). Excluding specific idiosyncratic situations (China real estate and Russia/Ukraine), the rest of the portfolio has continued to behave in line with expectations, generating a slightly negative performance compared with a context of extreme negativity in the market. The expected return of the portfolio (excluding China and Russia/Ukraine), will be able to generate a significant performance during 2022 which, added to the potential recovery of the two idiosyncratic components, will allow a significant rebound from current levels.

Yield-type strategy

The bucket generated a gross negative contribution to the monthly performance, with 29% of the positions (28 out of 95) contributing positively. The YTM remains attractive and conditions are always interesting in the short-term part of the credit curve. The average life of the yield-type portfolio is very short (12 months or 0.98 of spread duration), combined with a gross yield of 6.92% (in EUR) and z-spread of 742 basis points.
