*Class A adjusted for management fee difference used for periods before Class C inception.

Global market picture

The credit market environment remained extremely negative with year to date performances ranging from -10.5% for EM corp HY to -4.29% of the EU HY component. The IG EUR market is also negative by about 5.26% YTD, mainly due to the rates component. The short-term (1-3 year) H1WN global HY index also reports a performance of -6.25% YTD while the Global unconstrained (in terms of maturity) HY lost 5.76%. The Russian invasion of Ukraine remained the main theme of the month: there were several rounds of negotiations between the parties, but a ceasefire or any other sort of agreement seems unlikely to be reached immediately, even if sanctions imposed by western allies increased pressure on Russian economy. In this context, the 10 years bund yield was higher at +0.54% (+41bps in the month, highest level since 2018) in tandem with the 10 years Treasury at 2.34% (+51bps in the month), mainly due to concerns on inflationary pressure linked to energy cost, with oil prices reaching new year to date high at 108 per barrel. FOMC raised rates by 25bps during its march committee with Jerome Powell saying that FED need to move "expeditiously" towards tighter monetary policy, while ECB remained on hold notwithstanding mounting inflation pressure. Excluding specific idiosyncratic situations (China real estate and Russia/Ukraine), the rest of the portfolio has continued to behave in line with expectations, generating a slightly positive performance compared with a context of extreme negativity in the market. The expected return of the portfolio will be able to generate a significant performance during 2022 which, added to the potential recovery of the two idiosyncratic components, will allow a significant rebound from current levels.

Yield-type strategy

The bucket generated a gross negative contribution to the monthly performance, with 61% of the positions (51 out of 84) contributing positively. The YTM remains attractive and conditions are always interesting in the short-term part of the credit curve. The average life of the yield-type portfolio is very short (12 months or 0.98 of spread duration), combined with a gross yield of 6.03% (in EUR) and z-spread of 663 basis points.
