

# Swan Short-Term High Yield – USD

## July 2022

### Strategy

Swan Short-Term High Yield is the UCITS version of our Fixed Income Intermediate risk profile. Depending on market conditions, the strategy combines an highly diversified buy and hold portfolio of liquid short-term fixed income securities with an opportunistic allocation to longer dated securities in Global HY markets. Target Return is 3 months LIBOR + 250 bps.

### Risk Profile

Conservative

### Global market picture

— Swan Short-Term High Yield USD - Class A

Credit markets remained extremely negative with year to date performances ranging from -18.96% for EM corp HY to -10.45% of the EU HY component in tandem with the movement of the Eurostoxx 50 (-13.73% YTD) and S&P 500 (-13.34% YTD). The IG EUR market is also negative by -8.10% YTD, mainly due to the rates component. The short-term (1-3 year) H1WN global HY index also reports a performance of -10.44% YTD while the Global unconstrained (in terms of maturity) HY lost -11.68%. US entered technical recession, with growth of -0.9% in 2nd quarter following a contraction of 1.6% in first three months of 2022. During its meeting the FED raised benchmark policy rate by 75bps for the second month in a row, maintaining aggressive stance against inflation, but at the same time signaling that current range is close to what most of the officials see as "neutral rate". FED will be data dependent in its forthcoming decisions, with consequently strong attention reserved to next inflation and labour data. Also the ECB followed other central banks, increasing rates by 50bps (25bps more of what suggested) in its first rise in the last decade. In addition the ECB announced a new program in order to prevent a surge in yield for most vulnerable european countries. In this context, the 10 years bund yield was lower at +0.82% (-52bps in the month) while the 10 years Treasury closed the month at 2.65% (-36bps). Oil price corrected lower, with Brent now at 110\$ per barrel. Thanks to recent volatility spike we have been able to add several new credit stories at very interesting level of credit spreads. The new entries are companies with good credit metrics that were too tight before the sell-off. The combination of higher diversification, higher credit quality and higher expected yields paves the way for attractive returns in the next future.

### Active Portfolio

Credit Allocation Scoring (CAS) indicates a medium-long-dated allocation of 18.40%, flat relatively to the end of June(18.40%). Fund's actual exposure (beta and duration adjusted) is 22.46%, lower relatively to last month (24.62%). The mix between Strategic and Tactical positions is 0% Strategic and 100% Tactical. The fund has an estimated gross yield of 9.16% (in EUR), a low spread duration of 1.27 and a z spread of 876.

### Yield-type bucket

The bucket generated a negative gross contribution to the monthly performance, with 66% of the positions (39 out of 59) contributing positively. The YTM remains attractive and conditions are always interesting in the short-term part of the credit curve. The average life of the YT portfolio is very short (11 months or 0.9 of spread duration), combined with attractive yield to maturity.
