

Swan Bond Enhanced Sicav–SIF CHF

July 2018

Strategy

The sub-fund aims to generate significant excess return vs 3m Libor CHF in combination with extremely low volatility. The strategy is focused on the “buy and hold” levered investment in a highly diversified and granular portfolio of liquid short-term fixed income securities. Leverage is normally included between 100% and 200% of the NAV with invested capital between 2x and 3x the NAV.

High Reward

Global market picture

During July European credit markets experienced a positive performance (H9PC Index 1.55%), in tandem with a positive movement of the Eurostoxx 50 and S&P500 that gained respectively 3.83% and 3.60%. Central banks were really uneventful this month: ECB meeting did not signal changes to the tapering path (expected in 4Q18, with first rate hike at end summer 2019) while FED minutes confirmed the monetary policy expressed in previous meetings (market prices an 82% probability of 2 more hikes in 2018). Interest Rates market was more influenced by positive macro data: US expansion is pointing to become one of the longest in post war history, while in Europe economic data signaled stabilization in growth trajectory. 10 years Bund yield rebounded from 0.30% to 0.44%, while 10 years Treasury approached the 3% area (2.96%). July was also the month when the first round of US trade sanctions against China started (on \$35bn of goods), even if market was more worried about the possibility of an increase to \$200bn of goods threatened by President Trump. Emerging markets credit performance was positive (EMHB index +1.96% during July) after five consecutive months of negative results, notwithstanding a significant correction in oil price (Brent -6.53% @ 74.25 USD per barrel) and no signs of an agreement between US and China on trade war.

Yield-type strategy

The bucket generated a positive gross contribution to the monthly performance, thanks to 96% of the positions (88 out of 92) contributing positively. Positive contributions were homogeneously distributed, the only exceptions being PKSTAN 04/19, COGARD 11/18, EHICAR 12/18, ZENITH 04/19 thanks to a rebound in EM credit and IFIM 03/19; there were not significant negative contributions. The average life of the yield-type portfolio is very short (9 months or average spread duration of 0.76), combined with a yield of 4.34% (net of funding cost) and z-spread of 527 basis points. The fund is levered, being invested at about 202% currently.
