

Swan Ultra Short-Term Bond – EUR September 2020

Strategy

The sub-fund aims to generate excess return vs 3m Euribor in combination with extremely low volatility. The strategy combines the “buy and hold” investment in a highly diversified and granular portfolio of liquid short-term fixed income securities with the opportunistic and residual allocation of the promised average spread over risk free rate to a number of interest rate and FX active strategies.

Global market picture

During September European credit markets experienced a negative performance (H9PC Index -0.59%), in tandem with the movement of the Eurostoxx 50 (-2.41%) and S&P 500 (-3.92%). In this context Swan funds continued to move higher with a positive monthly performance ranging from +0.09% to 0.20%: our SIF funds are in positive territory (+3.37% SLSC and +2.86% for SBE) and also UCITS funds registered positive performance YTD (+1.13% USTB and +1.07% for STHY), while credit markets are still reporting negative returns YTD (European HY -2.71%, Emerging HY -0.02%, US HY -1.67% and EUR IG +0.68%). In US monthly data signaled a slowing growth, while politics added further uncertainty with negotiations on new fiscal stimulus still stalling. The 1st presidential debate did not bring significant news about candidate programs, but markets was scared by Trump continuous declaration about a unpeaceful transfer of power should he loses to Joe Biden. In its meeting the FED committed to a dovish policy until inflation has risen to 2% and is “on track to moderately exceed 2% for some time”, with dots now forecasting rates at these levels for the next three years. In Europe, notwithstanding the increase in COVID-19 cases especially in Spain and France, lockdown measures were only local and selective, but flash PMIs show signals of weakness. Government bond yields moved lower (10yrs Bund @ -0.52% and 10yrs Treasury @ 0.68%), while gold continued its retracement from August peak. We think that this is an interesting entry point for our strategy: current YTM combined with an average maturity of the bonds around 1 year give us confidence on the capability to generate positive performance in line with targets during 2020 and give us the opportunity to build portfolios with attractive returns on a 1 year horizon.

Yield-type strategy

The bucket generated a gross positive contribution to the monthly performance, with 71% of the positions (82 out of 116) contributing positively. The YTM remains attractive and conditions are always interesting in the short-term part of the credit curve. The average life of the yield-type portfolio is very short (9 months or 0.79 of spread duration), combined with a gross yield of 4.21% (in EUR) and z-spread of 531 basis points.
