

Swan Long Short Credit Sicav–SIF November 2022

Strategy

Swan Long Short Credit SIF is the alternative version of our Fixed Income High Reward risk profile. Depending on market conditions, the strategy combines an highly diversified buy and hold portfolio of liquid short-term fixed income securities, in a levered format, with an opportunistic allocation to longer dated securities in Global HY markets. Leverage is normally included between 0% and 150% of the NAV. Target Return is 3 months LIBOR + 450 bps.

Intermediate

High Reward

Global Market Picture

Credit markets remained extremely negative with year to date performances ranging from -18.88% for EM corp HY to -10.49% of the EU HY. The IG EUR market is also negative by -12.53% YTD, mainly due to the rates component. The short-term (1-3 year) H1WN global HY index also reports a performance of -10.29% YTD while the Global unconstrained (in terms of maturity) HY lost -13.32%. US CPI came lower than expected at 7.7% YoY, fueling optimism that rate hikes by FED will be less than previously expected by investors. Comments by Jerome Powell reinforced the expectations for a December hike of only 50bps, while other FED members like Bullard suggested that the proper zone for FED funds could be in the 5% / 7% range. Christine Lagarde said that the ECB "is not done" raising interest rates, affirming that inflation "still has way to go". Notwithstanding lower prices of energy and easing of gas supply bottlenecks, inflation did not invert its path, with core CPI stable at 5% YoY. After China Communist Party Congress, the authorities further raised the support to the embattled real estate sector, providing further funding in order to ease liquidity crunch. The 10 years bund yield was lower at +1.93% (-21bps in the month) in tandem with the 10 years Treasury that closed the month at 3.61% (-44bps). Thanks to the recent volatility spike we have been able to add several new credit stories at very interesting levels of credit spreads: our funds have a yield to maturity between 8% and 15%, combined with an average spread duration of below 16 months. The combination of higher diversification, higher credit quality and higher expected yields paves the way for extremely attractive returns in the next future.

Active portfolio

Credit Allocation Scoring (CAS) indicates a medium-long-dated allocation of 1.45%, flat relatively to the end of October (1.45%). Fund's actual exposure (beta and duration adjusted) is 60.12%, higher relatively to last month (56.68%). The mix between Strategic and Tactical positions is 0% Strategic and 100% Tactical. The fund has an estimated yield of 15.98% (net of funding cost in EUR), a low spread duration of 2.93 and a z spread of 1380.

Yield-type bucket

The bucket generated a positive gross contribution to the monthly performance, with 92% of the positions (87 out of 95) contributing positively. During the month our invested capital remained stable: conditions remain attractive in the short-term part of the credit curve. The average life of the yield-type portfolio is very short (9 months or average spread duration of 0.71). The fund is levered, being invested at about 252% currently.
