

Swan Long Short Credit Sicav–SIF

February 2023

Strategy

Swan Long Short Credit SIF is the alternative version of our Fixed Income High Reward risk profile. Depending on market conditions, the strategy combines an highly diversified buy and hold portfolio of liquid short-term fixed income securities, in a levered format, with an opportunistic allocation to longer dated securities in Global HY markets. Leverage is normally included between 0% and 150% of the NAV. Target Return is 3 months LIBOR + 450 bps.

Risk Profile

Conservative Intermediate **High Reward**

Global Market Picture

Credit markets reported a negative performance in February ranging from -2.53% for EM corp HY to -0.03% of the EU HY. The IG EUR market is also negative by -1.44% YTD. The short-term (1-3 year) H1WN global HY index also reports a performance of -0.14% YTD while the Global unconstrained (in terms of maturity) HY lost -1.38%. Data from US continued to show resiliency, with unemployment rate posting a new cycle low at 3.4%, while US core CPI print was slightly higher than consensus at 5.6% YoY. Also flash PMI at month end indicated further improvement in manufacturing activity, reducing worries about an imminent recession. FED raised rates by 25bps, saying that "ongoing increase in the target range to be appropriate", due to inflation that "eased somewhat" but was still elevated. ECB raised rates by 50bps, explicitly indicating that will further raise rates by 50bps in March, with investors starting to price terminal rate close to 4% in Europe. Initial market reaction to central banks meetings was strong with both bonds and equities rallying, but during the month the rebound faded, especially in the Fixed Income space. The 10 years bund yield was higher at +2.65% (+36bps in the month) in tandem with the 10 years Treasury that closed the month at 3.92% (+41bps). Oil was stable around 84\$ per barrel, while US dollar rebounded with DXY at 105. Thanks to the recent volatility spike we have been able to add several new credit stories at very interesting levels of credit spreads: our funds have a yield to maturity between 7% and 11.5%, combined with an average spread duration of below 16 months. The combination of higher diversification, higher credit quality and higher expected yields paves the way for extremely attractive returns in the next future.

Active portfolio

Credit Allocation Scoring (CAS) indicates a medium-long-dated allocation of 1.45%, flat relatively to the end of January (1.45%). Fund's actual exposure (beta and duration adjusted) is 60.88%, higher relatively to last month (53.51%). The mix between Strategic and Tactical positions is 0% Strategic and 100% Tactical. The fund has an estimated yield of 11.87% (net of funding cost in EUR), a low spread duration of 2.55 and a z spread of 866.

Yield-type bucket

The bucket generated a positive gross contribution to the monthly performance, with 79% of the positions (72 out of 91) contributing positively. During the month we decreased our invested capital: conditions remain attractive in the short-term part of the credit curve. The average life of the yield-type portfolio is very short (8 months or average spread duration of 0.63). The fund is levered, being invested at about 224% currently.
