Swan Ultra Short-Term Bond EUR - Class A

#### Global market picture

High Yield Credit markets reported a positive performance in December ranging from +3.20% for EM corp HY to +2.79% of the EU HY in tandem with positive equity markets, S&P500 (+4.42%) and Eurostoxx50 (+3.18%). The IG EUR market was positive by +2.98% while the short-term (1-3 year) H1WN global HY index reported a positive performance of 1.80%. The Global unconstrained (in terms of maturity) HY index was positive at +3.30%. The FED had its policy decision meeting on the 13th of December: interest rates remained at 22 years highs but forecasts showed that US officials believe rates will end next year at 4.5% / 4.75%, implying three quarter point rate cuts. In addition, the unexpected dovish stance by Jerome Powell during the press conference, further boosted market optimism about lower rates for 2024. The day after the FED decision, both the ECB and the BOE held interest rates steady at 4% and 5.25% respectively, with Christine Lagarde and Andrew Bailey affirming that there is still some work to do before inflation falls back to their target. Markets responded to this news continuing the bond rally started in November even if inflation data did not further surprise on the downside: November core CPI YoY was stable at 4% in US, while in Europe November core inflation was stable at 3.6% YoY. Rates market incorporated a relatively high probability of easing by both the FED and ECB during the next quarters, even if we believe central banks will act only when they will be convinced that inflation will remain below 3% on a sustained basis. The 10 years bund yield was lower at 2.02% (-43bps in the month), in tandem with the 10 years Treasury at 3.88% (-45bps in the month). Oil moved lower to 77\$ per barrel, while US dollar lost some ground with DXY at 101.33. Our funds have a yield to maturity between 7% and 9%, combined with an average spread duration around 17 months. The combination of diversification, good credit quality and high expected yields pave the way for extremely attractive returns in the next future.

#### Yield-type strategy

The bucket generated a positive gross contribution to the monthly performance, with 92% of the positions (150 out of 163) contributing positively. The YTM remains attractive and conditions are always interesting in the short-term part of the credit curve. The average life of the yield-type portfolio is very short (16 months or 1.40 of spread duration), combined with a gross yield of 6.95% (in EUR) and z-spread of 369 basis points.
