Global market picture

During April European credit markets experienced a positive performance (H9PC Index +0.64%), in tandem with the movement of the Eurostoxx 50 (+1.42%) and S&P 500 (+5.24%). Anti-COVID-19 mass vaccination campaign gathered pace in Europe: Italy reached the 500k inoculations per day, while Germany did better with 1mio jab in 24 hours. Notwithstanding this huge effort, cases are still elevated in Europe, and additional threat came from Indian variant that hit more than 360'000 persons in a single day in the Asian country. According to ECB projection Eurozone economy is likely to contract in the first quarter and then rebound 1.3% from April to June, while Christine Lagarde confirmed that "ample degree of monetary accommodation" is still necessary and an "ambitious and co-ordinated fiscal stance" from governments "remain crucial". US economy showed signs of strong recovery, posting the biggest monthly gain in retail sales in 10 years in addition to mounting evidence that labor market and economic activity are recovering quickly; GDP grew 6.4% in 1Q, bringing real GDP just 1% shy of its pre pandemic level. Biden's attention remained on the \$2.3tn infrastructure spending bill and \$1.8tn expansion of the social safety net, with the latter funded mainly with higher taxes on corporations and wealthy. In this context, the 10 years bund yield was higher at -0.20% (+9bps in the month), while the 10 years Treasury was lower at 1.63% (-11bps in the month). Oil jumped to 67 USD per barrel, while gold rebounded to 1769 \$ per ounce. We think that this is still an interesting entry point for our strategy: current YTM gives us confidence on the capability to generate positive performance in line with targets during 2021; average maturity of the bonds in our portfolios is still around 1 year and should help reduce volatility in case of new episodes of market stress.

Yield-type strategy

The bucket generated a positive gross contribution to the monthly performance, with 83% of the positions (82 out of 99) contributing positively. During the month we slightly decreased our invested capital even if conditions remain attractive in the short-term part of the credit curve. The average life of the yield-type portfolio is very short (11 months) or average spread duration of 0.89), combined with a yield of 4.25% (net of funding cost in EUR) and z-spread of 526 basis points. The fund is levered, being invested at about 161% currently.
